INTRODUCTORY

" There was and is an *Aryan* Race, that is to say the characteristic modes of speech termed *Aryan* were developed among the Blond Long-heads alone, however much some of these may have been modified by the importation of Non-Aryan elements."—HUXLEY.¹

NOTHING has been known as to the racial and linguistic affinities of the Sumerians, the oldest of civilized peoples, whose monuments and vast city ruins in Mesopotamia began to be discovered some fifty years ago, but who seemed themselves after suddenly appearing there with a fully fledged higher civilization to have as suddenly disappeared after a comparatively brief existence as a nation and leaving no descendants to continue their culture and language. Study by leading Assyriologists and Sumerologists of their language and writing has tended rather to deepen than dispel the mystery surrounding them, for it has led to the conclusion, crystallized by continual repetition into a dogma that the language had no affinity with any recognized linguistic group, and that in particular it had no affinity whatever with the Aryan languages—the English and the continental languages of Europe and of India.

Thus the Sumerians with their marvellously high civilization, art, culture and language have hitherto been regarded as a sort of fossil curiosity, a remote and totally extinct alien race in no way related to any modern people nor to their civilization or language. The reverse is now found to be the fact.

In former works I have described the manner in which, in searching for clues to the lost origin of the early Aryans, our long lost racial ancestors of the "white race" to whom we owe our civilization and language, I was led by the facts to observe that the Sumerians were the Early Aryans ;

¹ "The Aryan Question," *Nineteenth Century*, November, 1890, 766.

SUMER-ARYAN DICTIONARY

that the portrait representations of the Sumerians on their own monuments and official and sacred seals are preponderatingly of the Aryan physical type;¹ that the "Sumerian" Language with its writing was the Early Aryan speech and script and the parent of the Aryan family of languages ancient and modern with their writing, and in particular the parent of the English, Anglo-Saxon, "Celtic," Gothic, Norse, Greek, Latin, Sanskrit and all unsuspectedly also, of the Ancient Egyptian languages and writing; that this Aryan speech with its writing was spread over the ancient world by the Phœnicians, who were not Semites, as hitherto supposed, but the leading seafaring branch of the Sumerians or Early Aryans.

Indeed, the arbitrariness of the Assyriologist dogma of the Non-Aryan nature of the Sumerian language was self-evident, in that it was admittedly not based upon any serious comparison of the languages themselves. Thus the leading Sumerologist in this country summarily dismisses the mere possibility of any such affinity with the words: "I am convinced that it [the Sumerian language] has no affinity with either the Caucasian, Aryan or Semitic groups. This side of the problem *has not occupied my attention as the futility of such efforts is at once apparent.*"² [sic!]

On the other hand, as the result of my actual detailed analysis and comparison of the Sumerian with the Aryan family of languages, I recorded that the Sumerian proved to be radically Aryan in its words, structure and script, and that "the whole family of Aryan languages with their written letters is derived from the Phœnician language and script and its parent the Sumerian, *and that about fifty per cent. of the commonest words in use in the English language to-day is discovered to be Sumerian in origin with the same word-form, sound and meaning.*"³ And I gave many specific instances of the Sumerian origin of critical English

Marshall in the excavations of the ancient city-site in the Indus Valley, which has yielded so many cultural objects and inscribed seals which I have termed "Indo-Sumerian" (WISD *passim*), in no way militates against the Aryan racial character of the Sumerians, for I have adduced the Indian Epic and Vedic evidence to show that that Sumerian colony traded with Tibet and conquered the mongoloid Sakas or Scythas of the Upper Indus Valley and incorporated them in the great Sumerian empire.

and other Aryan and Egyptian words occurring incidentally in the texts of the Sumerian and Phœnician monuments and seals and on the pre-historic monuments of the Ancient Britons cited and translated therein. Further I adduced evidence for the Sumero-Phœnician origin of Egyptian civilization and its language and hieroglyphic writing, and found that Menes or *Aha* "the warrior," the First of the Pharaohs, and Sargon-the-Great were Aryan Sumero-Phœnicians—the former being clearly identified with the Mesopotamian emperor Manis-tusu or "Manis-the-warrior," the son of Sargon, and thus gaining for the first time a synchronism for Menes to fix his date, the most disputed of all critical dates in ancient history.

The present Dictionary, on the compilation of which I have been engaged more or less continuously for the past sixteen years, now gives the detailed results of my comparative analysis and exploration of the Sumerian and Aryan languages, and more especially in regard to the English language, which is disclosed as one of the chief branches of the Sumerian and Aryan Phœnician. It will be seen that where no Aryan affinity whatever has hitherto been found or even suspected by Assyriologists and Sumerologists as existing in Sumerian, practically all the Sumerian words are radically Aryan, and that over 75 per cent. of the current English words (numbering many thousands even from the radical word-signs and more common compound signs to which this Dictionary is limited) are derived from the Sumerian, and that the Ancient Egyptian language at present unsuspected of having any affinity with the Aryan is also with its system of hieroglyphic writing radically Aryan.

The Sumerian language, thus seen to have been evolved by our Aryan ancestors, has with the great spiritual and cultural current which it embodies flowed steadily down into our modern life, and so explains the remarkable fundamental unity of thought in the higher ancient civilizations which has endured down through the ages.

The vastly remote currency of Aryan words might indeed have been suspected from what we know of how poetic associations become attached and cling to words through long usage. And we may surmise that the rapid and enormous progress in literature with the revival of letters and

SUMER-ARYAN DICTIONARY

the "word-magic" which characterizes the best poetry of both ancients and moderns—that of Homer and Virgil, of Dante, Shakespeare and Milton—have been due in a hitherto unsuspected degree to the long life and world-prevalence of the Aryan language which resulted from the enterprise of the Sumero-Phoenicians.

NEED FOR A COMPARATIVE SUMER-ARYAN DICTIONARY

In view of these discoveries, a comparative dictionary of the Sumer-Aryan family of words has now become a practical necessity, not only for expert philologists but also for the general educated public, English and other, in order to learn the original meaning, etymology and life-history of the Aryan words which they daily use. All the more so is this necessary, as etymology which is so essential for the right use of words is nevertheless sadly neglected nowadays in our schools and colleges, and the necessity voiced by Chaucer has not yet passed away :

" And for there is so great diversite
In English, and in writing of our tongue ;
So pray I God that none mis-write thee." ¹

Until now, philologists and "purist" writers and speakers of the Aryan tongue, in seeking for the original meaning, etymology and pedigree of Aryan words, have been unable to go further back than the Greek and Sanskrit. Now, however, we go back some thousands of years farther to the common parent of all the Aryan languages. And we find that most of the common words in the English, "Anglo-Saxon" (now seen to be largely Briton), Gothic and Latin languages, supposed by classic scholars to be derived from the Greek, are now disclosed to be clearly derived independently of the latter from an earlier common parent, and often preserve purer forms than the Greek and Sanskrit.

As this work is written for the general educated reader, the following notes which seem called for by way of preliminary explanation have been rendered as free from technicalities as possible.

SUMER-ARYAN DICTIONARY

"ARYAN" ESSENTIALLY A RACIAL OR ETHNIC TERM

The title "Aryan" is the Anglicized form of the Sanskrit *Arya*, "the noble or exalted," a term which is employed in Indian literature, ancient and modern, solely in a racial sense to designate the fair ruling and civilizing race as opposed to the dark aboriginal subject people, and India itself was called "the Land or Region of the Aryas (or Aryans)." It is also used in its proper racial sense by Huxley in the heading in designating the fair long-headed people, now mainly represented in Europe by the British and Norse or Scandinavians, the so-called "Nordics" of modern anthropologists.¹

It is similarly used in a racial or ruling sense by the Sumerians, Akkads, Amorites and Hittites in its earlier form of *Ar*, *Ara*, *Ari*, *Har* or *Harri*, also meaning "exalted or noble" (see *Ar*, *Ara*, etc., in Dictionary), and similarly with a like meaning in Ancient Egypt (see *Hari*, *Heri* under *Ar* in Dictionary); and the ancient Greek name of *Aeria* or *Hariē* for Egypt, probably designated that country as "The Land of the *Ari* or Aryans." The Medes, as Herodotus records, were formerly called *Arii*; and "*Ariana*" or "Land of the *Ari*" was a title of Persia and the source of the modern name Iran for that land. The title *Harri* is used by the Mitani or the Early Medes, on their records of about 1400 B.C. Darius-the-Great calls himself on his tomb "an *Ariyo* of *Ariyo* descent." It is the *Her* title of the Ancient Goths, in their great epics, the Eddas, and the source of the modern *Herr* or "master" of Teutons and Scandinavians, of the Irish Celtic *Aira*, a "chief" or "nobleman," and of the *Ar* in aristocratic (see *Ari* "Aryan" in Dictionary).²

This title *Ar*, *Ari*, *Arya* or "Aryan," appears, as I have shown, to have originally designated the Early Aryans as "The ploughmen" from the Sumerian *Ar*, *Ara*, "plough," which is now disclosed as the source of the Old English *ear*, "to plough, to *ear* the ground" and of "ar-able," etc. (see *Ar*, "plough" in Dict.). The Aryans are now seen to have been the traditional inventors of the plough and of the Agricultural Era of the World;³ and the sense of *Ara* or "the exalted ones" appears to

SUMER-ARYAN DICTIONARY

have been used for this title when this gifted race became the rulers of the various aboriginal tribes—the Sumerian also gives the plough sign the meaning of “raise up, exalt” as the secondary meaning of ploughing as “the uplifting” of the earth (see *Ara*, exalt, in the Dict.).

The present-day unwarranted restriction of this racial term “Aryan” to language was merely introduced about half a century ago by Germanic writers in order to support the “Teutonic” theory of the Teutonic origin of the English and Norse languages. Till then the Germans, largely owing to the writings and reputation of the English philologist Max Müller, were regarded as the leading European representatives of the Aryan race and language. In 1871, however, the eminent French anthropologist M. de Quatrefages conclusively demonstrated that the prevailing head-form of the Prussians, the dominant Germans, was *round*-headed and not *long*-headed, which is the Aryan type, thus proving that the Prussians (and with them the bulk of the German people) as a race were *not* Aryans at all. This was fully confirmed by subsequent observers and also in regard to the prevailing head-form throughout Germany. Forced in this way to abandon the *racial* use of “Aryan” for the Germans, Max Müller and the Germanic school still clung to the title of “Germanic or Teutonic” which they had gratuitously applied to the whole family of Aryan languages in Europe, and accordingly arbitrarily limited the use of “Aryan” to a linguistic sense. And by mere mechanical repetition, this nomenclature of “Germanic” or “Teutonic” as the equivalent of “Aryan language” in Europe is still used by docile English and continental philologists and grammar writers, excepting the French. The unfoundedness of this claim that the “German or Teutonic” language is the oldest and purest Aryan language in Europe is everywhere evidenced by the word-facts themselves throughout this comparative dictionary. It is there seen that the English, Briton, Anglo-Saxon, Eddic and Eastern Gothic, Norse, Celtic, French and Italian words generally all preserve relatively purer and older forms than the German, which moreover wants a considerable proportion of the most elementary Aryan words. Similarly in regard to the important Gothic groups, including the uniquely important famous ancient epic poems the Eddas, written in runes, and preserving a dialect of the Ancient Briton, to which the Teutons lay claim, it is

SUMER-ARYAN DICTIONARY

significant, as the leading Runic scholar, Professor Stephens of Copenhagen has pointed out, that no runic monuments, so common in Britain, Norway, Sweden and Denmark, have ever been found in Germany.

"SUMERIAN" AN ARBITRARY ETHNIC TERM OF ASSYRIOLOGISTS

The name "Sumerian" which is now applied by Assyriologists to this earliest civilized Non-Semitic people of Mesopotamia has never been found to have been used by these people themselves. It is coined by Assyriologists from the name "Sumer" which was applied to Lower Mesopotamia by the later Babylonians and Assyrians. The arbitrariness of this application is evidenced by the fact that this label was formerly attached by Assyriologists to the supposedly diametrically different race now called by them "Akkads" and whom they also arbitrarily term "Western Semites," but whom they previously called "Sumers," or "Sumerians." But latterly they arbitrarily reversed the labels with the result of adding still more to the confusion, as "Akkad" is a synonym for the Sumerian *Ari* (or *Āryan*) a title also of the Amorites who are admittedly non-Semites; and these "Akkads" from Sargon downwards I have shown are identical with leading early Aryan kings in the official king-lists recorded in the Indian Epics.

As this name "Sumerian" or "Sumer," however, has obtained currency for several decades as the title for these Early Non-Semitic civilized people in Mesopotamia, now found to be Aryans, and for their language, we are now forced to continue its use as such, despite its arbitrariness and misleading effects. Hence the present comparative Dictionary is styled "Sumer-Aryan."

HOW THE SUMERIANS AND THEIR MONUMENTS WERE DISCOVERED AND THEIR WRITTEN LANGUAGE DECIPHERED

The discovery of the "Sumerians" and their Language with the deciphering of the Sumerian writing is one of the greatest archaeological romances of Science of the nineteenth century. It gains new and personal interest by the discovery that the Sumerians were our Early Aryan ancestors, and that their language with its writing was the parent of the

SUMER-ARYAN DICTIONARY

English and other Aryan languages with their alphabetic writing (see my *Aryan Origin of the Alphabet* now in the press). At the same time it illustrates the inveterate opposition of Semitic scholars to the discovery of the Truth regarding the racial authorship of Civilization and Writing.

The existence of the Sumerians and of their Non-Semitic language disclosing a remotely early civilized Non-Semitic ruling people of the ancient world wholly forgotten by Greek historians, was first elicited by the brilliant genius of Sir Henry Rawlinson in 1855. An officer of the East India Company's service, he had been sent as a lieutenant to Persia in 1833 to assist the Shah in the training of his army, and finding there in 1835 inscriptions in the as yet undeciphered cuneiform or "wedge" writing, he forthwith took up the task of intensive decipherment and became a leading pioneer explorer and in considerable part founder of the newly born science of Assyriology of his time.¹

The key to the decipherment of the mysterious Babylonian and Assyrian writing and through it the Sumerian was eventually found in the cuneiform inscriptions of Persia of which Rawlinson was one of the pioneer decipherers, and of which large numbers had been brought to notice during the previous two centuries by travellers to Persepolis, the beautiful ancient Persian capital destroyed by Alexander, and as curiosities had been partially copied and published, but they remained undeciphered by orientalists.

The first observer to pave the way for the decipherment of these cryptic Persian cuneiform inscriptions was the Danish scientist Karsten Niebuhr. He was a member of an expedition sent by the Danish Government in 1761 to explore Arabia, where all the members of the ill-fated company perished except Niebuhr, who made his way under great privations to Bombay in 1764. Nothing daunted, after fourteen months' stay at Bombay, he ventured forth to Mesopotamia and Persia to explore

¹ For fuller details see BRA, SAC, and JRAS X, 1846, 3 f. Latterly, Rawlinson, while consul-general at Bagdad, was Director-General of Excavations in Mesopotamia for the Trustees of the British Museum from 1846-1855, in which latter year he retired to devote himself entirely to cuneiform decipherment, and became Editor-in-chief for the publication of the vast body of cuneiform material then amassed in the British Museum, in the monumental five volumes of *Cuneiform Inscriptions of Western Asia* which, through its bilingual lists and Sumerian records continues to be a chief source of our knowledge of Babylonian and Sumerian words.

SUMER-ARYAN DICTIONARY

the famous ruins there. He spent three weeks at Persepolis making those complete and accurate copies of the inscriptions which together with his critical analysis of them made their decipherment possible. He observed that the inscriptions *always occurred in three distinct versions and in the same order*, and thus were presumably trilingual versions of the same record. He further noticed that the first version (afterwards discovered to be in Old Persian, an Aryan language) contained only forty-two signs usually separated by a dot, and he rightly inferred that this writing was *alphabetic*; and he actually drew up an alphabet of these signs, to which however he could not as yet assign letter-values which proved substantially correct, though it included punctuation marks and diphthongs. And he further observed rightly that this alphabetic writing was intended to be read from left to right as in European languages. Continuing these observations, another Danish scholar, Bishop F. Münter, in 1880, conjectured that a word which occurred near the beginning of each inscription in this first or alphabetic version signified "king," and this afterwards proved correct.

The first actual beginning of the decipherment of some words and letter-values in this first or alphabetic version of the Persian inscriptions was significantly made, not by an orientalist, but by an outsider, the Hanoverian schoolmaster G. F. Grotefend in 1802, using merely his common sense and scientific inductive methods. Adopting Niebuhr's suggestions that the inscriptions were trilingual and that the first version was alphabetic, he assumed that the first version would be in Old Persian, the language of the paramount ancient Persian kings, and that the other two versions were translations of the same record into the other two chief languages current in the old Persian empire, just as the later Persian kings were in the habit of translating their edicts into Turkish and Arabic for the information of the subjects who spoke those languages, and this ultimately proved correct. In analysing the first or "Persian" versions in the various inscriptions he accepted the recurrent word for "king" as suggested by Münter, and he read it provisionally as *Khshesh*, which was the Zend or ancient Persian word for "king" in the only Zend dictionary then known, instead of *Khshayathiya* as it afterwards proved to be—a name derived as we shall see from the Sumerian *Khat-ti* or

SUMER-ARYAN DICTIONARY

Xat-ti "a ruler" and the source of "*Satrap*" or subordinate ruler or governor. He then observed that the word in front of this word for "king," and which was presumably the personal name of the king, varied in different monuments, and that one of these front-names was peculiar to one set of monuments, whilst another of the front-names was peculiar to another set. Again other monuments gave both forms of these names, which he inferred represented the names of two ancient Persian kings in the relationship of son and father, with the latter in the genitive case, all of which proved to be correct. In this way he read, substantially correctly as it proved, the well-known classic names of Darius and Xerxes (the son of the former) and Hystaspes; and by the spelling thus elicited he succeeded in assigning correctly twelve letter-values to these hitherto wholly undeciphered Persian cuneiform signs. He presented his *Memoir* on 4th September 1802 to the Academy of Göttingen, but characteristically as he was an outsider and not an "established authority" they refused to print it.¹ As a result "for a whole generation the work of decipherment was allowed to sleep" !

Interest in Grotefend's discovery was partially revived in 1822 by the French orientalist Abbé Saint-Martin who adopted it and followed it up to some extent. This attracted the attention of the Sanskritists Emile Burnouf and the Norwegian Christian Lassen, both of whom published in 1836 almost simultaneously translations of the greater portions of the Persian alphabetic versions,² though they had correctly made out only about half of the Persian alphabet. Enough however was apparent to enable Lassen to show that the language was Aryan, and was Old Persian, a sister to the Zend and Sanskrit.

Meantime Rawlinson in Persia had taken up the task of decipherment in 1835 when, as military assistant to the governor of S.W. Persia, he visited Hamadan (Écbatana) and copied the trilingual inscriptions there and at Behistun. Knowing only of the work of Grotefend, he detected the names of the three kings as described, *and independently made out his own working alphabet for the signs in the Persian version, and Rawlinson's alphabet proved to be the first practically complete alphabet of these*

¹ It was published elsewhere in 1815.

² Burnouf dealt specially with the Hamadan set.

signs. He was now the first to copy, decipher and translate the Persian version in the voluminous trilingual edict of Darius-the-Great carved on the great cliff at Behistun (and later of its other two versions), which through the extreme length of its text became a chief key to the decipherment of the Babylonian and through it of the Sumerian. In 1837 he sent to the Royal Asiatic Society a copy of the greater part of the Persian text of this edict with decipherment and translation of its opening passages and notes, which was a great advance on previous attempts on this script; but before it was published the articles of Lassen and Burnouf reached him, necessitating a revision of his work and the postponement of its publication. "By the beginning of 1839 he had deciphered and translated nearly all the 200 lines (of the Persian version), which he had copied from the Behistun text; and he says in his *Memoir* that in many cases Lassen had at that time understood neither the grammar nor the etymology of the texts he tried to translate. That same year he sent a supplementary paper to the Royal Asiatic Society containing a summary of the greater part of the Behistun text (Persian version). The translation which he made in 1839 is substantially the same as that published in his *Memoir* (received) in 1846, and modern scholars have succeeded in modifying it in a few details only. There is no doubt that before 1840 he had made himself the Father of the decipherment of the Persian cuneiform."¹

But by far the greatest and most far-reaching problem still awaited solution, namely, the decipherment of the third version of the trilingual cuneiform,² which was early recognized to be Babylonian writing by the similarity and identity of its signs with those written on the clay tablets and monuments of Babylonia, and it still remained wholly undeciphered. The key to unlock the Babylonian writing had for long been recognized to be the Persian version of these trilingual cuneiform texts. But this key as it stood would not turn in the lock. The Babylonian writing was *not* in alphabetic characters, but by many hundreds of different signs of different shapes, though it was clear that the proper names of the first version when recognized in the Babylonian version would eventually furnish a key to the whole, and such proved to be the case.

¹ BRA, 52.

² The second version was found to be merely the dialect of Susa or Elam.

SUMER-ARYAN - DICTIONARY.

This trilingual key therefore to the decipherment of the Babylonian writing was analogous to the famous trilingual Rosetta Stone which formed the key to the decipherment of the Egyptian hieroglyphs through the proper names in its Greek version ; and it was also analogous to the bilingual Phœnician inscription on the Newton Stone in the Don Valley in which, as I have shown,¹ the Ogamic confirmed the Aryan Phœnician version.

Urgent incitement to hasten the application of this potential key to the decipherment of the Babylonian writing ensued in 1843 from the sudden unearthing of immense masses of new specimens of Babylonian writing near Nineveh in Assyria in that year onwards. These profusely productive exploratory excavations resulted from the publication of the unique collection of Babylonian inscribed objects gathered by C. T. Rich, British Resident and Consul-General at Bagdad, and by his talented secretary Captain K. Bellins of the East India Company's service, and acquired by the British Museum in 1825. It comprised inscribed baked clay cylinders, clay tablets, stamped bricks and stone-monuments and fine copies of other inscriptions of the same class.

The publication in 1836 of this collection of Rich along with his *Narrative* showing where his specimens were found, with notes of other promising sites for excavation at Mosul (Nineveh), etc., created a profound impression on oriental scholars and archæologists with an urgently expressed desire for excavations at the sites indicated. The British archæologist and traveller Mr. (afterwards Sir) Austen Layard, incited by Rich's *Narrative*, visited the sites in 1840, and applied in 1842 for a permit to excavate the great mounds of ruins at Nimrūd (Calah) near Mosul (Nineveh) ; but it was refused. The French Government, more fortunate, and also led by Rich's results, succeeded in establishing in 1842 for this purpose a special vice-consulate at Mosul with M. Botta an Italian archæologist as vice-consul and excavator of that neighbourhood. In 1843 Botta at Khorsabad, about ten miles from Mosul, uncovered the magnificent palace of the well-known Assyrian king Sargon (721-705 B.C.), the same who had sent the Jews into captivity, with hundreds of yards of sculptured slabs with colossal winged man-headed bulls, etc., etc., and

he returned to France in 1845 with a ship-load of magnificent sculptures, now in the Louvre, but with relatively few literary records.

The discovery of the first great mass of literary cuneiform material however was reserved for Layard after all. At Layard's repeated entreaties the British Ambassador at Constantinople, Sir Stratford Canning (afterwards Lord Stratford de Redcliffe), eventually procured in 1845 a *firman* from the Sultan for his own excavation of Nimrūd and Kuyunjik mounds to the north, with Layard as his agent, and he provided the very great expenses himself as no official British funds were forthcoming. Layard began his excavations in the winter of 1845 and the stupendous richness of his finds is a matter of history. He uncovered not only the magnificent palaces of several other Assyrian kings with even more colossal bulls, etc., and inscribed monuments, including "the black obelisk"; but most important of all his excavations unearthed the Royal and Temple Libraries with very many thousands of closely-written baked clay tablets, many of which proved afterwards to contain long lists of characters, dictionaries, bilingual lists and grammars.¹ These priceless finds, which Sir Stratford Canning with admirable public spirit gifted to the nation, now adorn the halls and galleries of the British Museum and fill a large proportion of its shelves with a profusion of cuneiform records, which have yearly been added to by subsequent excavations.

Yet all this vast collection of Babylonian and Assyrian writing amassed by Rich, Layard and Botta still remained undeciphered and its contents sealed.

The first application of the Persian key scientifically and successfully to the decipherment of Babylonian writing was made by the Irish scholar and Egyptologist, Dr. E. Hincks, rector of Killyleagh, who had never been in Mesopotamia himself. In 1846 he published² his long article "On the Three Kinds of Persepolitan Writing." In this he showed through his knowledge of Egyptian that the multitudinous characters in the second and third versions were *syllabic* and not alphabetic. And by the phonetic values of the proper names obtained through their Persian

key, he was able to read many of the other words, and thus found that the language of the Babylonian versions was Semitic, and allied to the Hebrew. And by the decipherment and analysis of some of the Assyrian texts he laid the first solid foundations of Assyrian grammar. One of the first fruits of his discovery was his recognition in the Assyrian inscriptions of the well-known names of Hazael of Damascus and Jehu of Israel, and later Nebuchadrezzar, Sennacherib, Hezekiah and Jerusalem; and a French savant had found the name of Sargon, the late notorious Assyrian.

Many Semitic scholars were now attracted by the task of trying to decipher the Semitic, Babylonian and "Assyrian" texts, dictionaries and grammars and to extend the word-signs lists, and the new science "Assyriology" took shape.

Rawlinson, now Consul-General at Bagdad and Director of the British Museum excavations in Babylonia and Assyria, took a leading part in advancing the work of Babylonian or "Assyrian" decipherment. In 1850¹ he communicated his independent analysis and decipherment of the long Babylonian text of the Behistun edict with translations, grammar, commentary and list of the majority of the signs with their phonetic values. This long Behistun text proved to be a uniquely fertile source for the decipherment of the Babylonian through its Persian version, as the edict bristled with the proper names of the many lands and peoples whom Darius had conquered and with names of kings and chieftains. He also contributed in the same year his *Memoir* on the Babylonian and Assyrian inscriptions.²

In the former article he announced the discovery of two fundamental facts of Babylonian writing, namely, that the signs besides their phonetic (or "syllabic") values were also used *ideographically* to denote objects and ideas—a fact which had meantime, unknown to Rawlinson, just been recognized in Europe—and secondly, the important fact, which no one had previously noticed, that most of the signs were "polyphonous," each character possessing more than one phonetic value. This latter fact was contemptuously rejected by Semitic scholars as being contrary to all established notions. But it was accepted by the sage Dr. Hincks.

Hincks, as an Egyptologist, appears to have been the first to recognize

that the ideographic feature of the signs implied that the latter were originally pictorial as in Egyptian, notwithstanding that the pictorial feature was scarcely if at all recognizable in the conventional cuneiform shapes of the signs hitherto unearthed (the Sumerian pictograph hieroglyphs not having yet been found to any extent). He also explained the "polyphony" on the same basis. Thus the pictograph word for "foot" he showed would denote not only "foot" but also "go," "run," "walk," etc., each of which names would become a phonetic value of the sign. And this fact of "polyphony" was fully confirmed by further research, and is now universally accepted, even by the Semitic scholars who had formerly rejected it.

Now comes the great epoch-making discovery of the "Sumerians" and their Non-Semitic language and race, a discovery which proved to be of more overwhelming importance than all the others. This discovery was announced by Rawlinson in 1855.¹ He noticed that the language in many of the texts from Nineveh and in a tablet from Larsa in Lower Babylonia was written in a Non-Semitic language, that the Non-Semitic texts, which were mostly of a religious kind identical with the Assyrian, were furnished with interlinear Assyrian translations, and that many of these Non-Semitic words were found in other tablets containing bilingual lists (or "syllabaries") of these words to which Semitic Assyrian equivalents or translations were attached, showing that these bilingual lists were used as dictionaries to this earlier Non-Semitic language. Further, he found several actual contemporary inscriptions in this early writing in the date-records, building inscriptions, bricks and votive texts unearthed in Southern Babylonia and Susa by W. K. Loftus, a scientific geologist, and J. E. Taylor in their excavations, in 1852-54, *beneath* the Babylonian period foundations.

From these facts Rawlinson, with rare insight, concluded that this Non-Semitic early language was spoken by the early civilized inhabitants of Mesopotamia, who were Non-Semites in race and had given the Semitic Babylonians and Assyrians their civilization, religion, and writing—for this latter also was now seen to be obviously derived from the writing of

these early peoples who appear to have been the first inventors of linear writing. He considered that these early people were "Akkadians," as he had observed that the "Semitic" Babylonian and Assyrian kings styled themselves in their historical inscriptions "King of Sumer and Akkad," and "Akkad" was the name of a city founded by Nimrod along with Babel according to the Old Testament. And their language he called "The Hamitic language of Babylonia,"¹ as it was Non-Semitic.

The Semitic scholars protested; but Hincks confirmed and adopted these discoveries of Rawlinson, and he called this early Non-Semitic language as well as its authors "Akkadian." He showed by further evidence that they were the founders of Babylonian Civilization, Religion and Writing, and that the language was agglutinative like that of the Turks and Finns.

Again the Semitic scholars protested. It was impossible, they urged, that the Semites had borrowed their civilization, religion and writing from any other race, for the mere suggestion of such a thing was contrary to all established authority!

The facts, however, as published by Rawlinson and Hincks were fully confirmed and extended in 1863 by the brilliant French professor of Assyrian, Jules Oppert, who conducted an exploring and excavating mission in Mesopotamia for three years for the French Government. He called these early people by the alternative title "Sumerian"; and he showed in more detail that a large proportion of the tablets in the temple library of Nineveh consisted in translations, mostly religious, from this older Non-Semitic language with Assyrian translations, comparative grammars, vocabularies and reading-books in the two languages.² And his title of "Sumerian" for these people was eventually adopted by English Assyriologists after 1887³ in place of "Akkad," which latter title they transferred to the "Semitic" people and their language.

Semitic scholars still refused to admit the facts, and declared that the Sumerians and their non-Semitic race and language were non-existent

¹ He also provisionally called the language "Chaldean," as that was the name in use for the ancient people of Babylonia; but this name, I have shown, belonged more especially to the Pre-Sumerian aborigines and their descendants.

and were merely " the folly of a few ' untrained amateurs ' who could be safely disregarded ! " ¹

Nevertheless the little band of pioneer scientific Sumerologists, Rawlinson, Hincks and Oppert, patiently continued their researches unmoved by these sneers, amassing further details regarding the Sumerians and their texts and records, and gained to their ranks such noted Sumerian scholars as Lenormant, Haupt, Sayce, Schrader, Hommel and others.

Suddenly, in 1877, the massive structural remains of a mighty Sumerian city and seaport of " about 3100 B.C." was unearthed at Tello (or " The mound ") in the delta of Lower Babylonia by the French Expedition under M. de Sarzec. The city was so large and rich in sculptures, inscriptions, etc., that M. de Sarzec continued without intermission the work of its excavation for twenty-three years, until 1900; and its treasures now adorn the Louvre. It had been destroyed by fire about 2300 B.C. and ever since, except for a superficial occupation of its mounds of ruins by Parthians in the second century B.C., it had lain deserted and undisturbed by Babylonians and Assyrians, awaiting the spade of the scientific modern excavator to bring to the light of day its wealth of archaic monuments and records to tell their own story at first hand.

This old Sumerian city covered an area of about two and a half miles by a quarter of a mile in breadth, and contained great buildings, palaces, temples, granaries and other public buildings built of good kiln-made bricks, the lower portions of the walls in many cases still standing intact over ten to fifteen feet high. It teemed with stone sculptures, mostly bas-reliefs, covered with inscriptions in the old pictographic linear writing occasionally merging into early cuneiform, with rich stores of votive records, foundation tablets, edicts, inscribed clay cones and tablets, sacred and official cylinder-seals engraved with marvellous art and technique, carved and inscribed stone mace-heads, alabaster and other vases inscribed, jewellery enamelled and worked in gold and silver, embossed silver-ware, copper weapons, decorated earthenware, and a host of other cultural objects of a great civilized and literate people.

The city was revealed by its inscriptions to have been a capital of the great " Sumerian " king Uruash-the-Khād (the so-called " Ur-Nina " of

Assyriologists), whom I have proved elsewhere to have been an Aryan Phœnician and the founder of The First Phœnician Dynasty, and a famous Aryan priest-king in the Indian Vedas and Epics. It yielded multitudes of inscribed monuments of himself, his sons and descendants in the dynasty for about two centuries, in several of which monuments they are portrayed of Aryan and non-Semitic physical type, and his descendants also are famous Aryan kings and priest-kings in the Indian Vedas and Epics. Their monuments contained records of great public works, and of temples built or repaired by them, and of their wars against revolting and other city-states, codes of laws and regulations, etc. Numerous and more finely executed inscribed monuments, statues, seals, etc., were also found of the priest-king Gudea of the later "Sumerian" dynasty, and he too was a famous Aryan priest-king in the Indian Epics.

Besides these discoveries at Tello, the deeper excavations at other ancient sites all over Babylonia, below the foundations of the "Semitic" Babylonian period have yielded similar Sumerian records of these and many other early Sumerian kings and governors. And nearly every year has added to the number of Sumerian sites found with monuments and inscriptions and kings' names. Amongst the later notable excavations of Sumerian sites, not to mention those which have lately yielded the Indo-Sumerian seals, etc., in the Indus Valley, are those at Susa begun by Loftus and continued by the French Expedition under M. de Morgan, the American exploration of Adab by the Chicago Expedition under Banks, and of Nippur by the University of Pennsylvania, and of Kish by Professor Langdon. The Nippur Expedition unearthed the temple library of that great Sun-temple there, recovering amongst other things over 50,000 inscribed clay-tablets many of which are not yet deciphered, and from beneath the foundation of its temple tower was unearthed the oldest historical Sumerian record yet known, the inscribed votive "Bowl of Uduḡ."

These Tello Sumerian texts and records disclosed unequivocally that the Semitic Babylonians and Assyrians had borrowed their system of government, laws, literature and writing and art from the "Sumerians." Haupt in his *Sumerian Family Laws* in 1879, in which he begins the

SUMER-ARYAN DICTIONARY

scientific analysis of Sumerian etymology, discloses Sumerian family customs which are now seen to be essentially similar to those of the Early Aryans, and this is confirmed by the later and more detailed finds. The Sumerian law-codes were seen to be the basis of Hammurabi's code of Babylon which is now universally regarded as the basis of the Mosaic code and legislature. The leading elements of the Babylonian and Assyrian or Chaldean religion in regard to the Father-god, which so strongly influenced the Hebrew religion and gave the latter its God-name *Jah*, were disclosed to be derived from the Sumerians. And the practice of the Semitic Babylonians and Assyrians in mechanically repeating the old Sumerian religious texts was seen to be analogous to the repetition of the old "dead" Latin language in the rituals of medieval and modern Roman churches.

In former works I have shown that the reason why so many of the Babylonian inscriptions are in the Semitic language is because great numbers, perhaps a majority of the subjects of the Empire, spoke Semitic languages and understood no other; and in a monograph now passing through the press I give in detail the proofs that Sargon-the-Great and his Akkads were Aryan in race and speech. That others besides myself are awaking to the truth in these matters is indicated by the steady diminution in the number of scholars who think that the Babylonian civilization was derived from the Semites, that the Sumerian was an invention of Semitic Babylonian priests, that cuneiform writing was Semitic and not Sumerian in origin, that the Hammurabi Law Code was the invention of Semites, and that the Muru or Amorites were Semites.

THE SUMERIAN LANGUAGE IS ARYAN IN STRUCTURE

Sumerian is a written language, in which the writing is a practical and ingenious attempt to represent scientifically by pictographs the living speech of a highly civilized people. This Sumerian writing has its interest greatly enhanced by the discovery I previously announced and which is detailed in my forthcoming work on "The Aryan Origin of the Alphabet" that it is the hitherto unknown source of our modern alphabetic letters and writing. And significantly it is ordinarily written

SUMER-ARYAN DICTIONARY

in the *Aryan* direction of writing, that is from the left hand towards the right, the direction of the apparent movement of the Sun, as in English writing, in contradistinction to the retrograde or reversed "Semitic" direction in the path of the Moon—a distinction presumably based upon the Sun-worship of the Aryans as opposed to the inveterate Moon-worship of Darkness and demons requiring bloody sacrifices, characteristic of the Semites, Chaldees and primitive tribes.

As the present work deals only with the individual *words* of the language, it is unnecessary to describe here the structure of that speech which is already detailed in its special grammars. It need only be mentioned that, like the more primitive languages, Early Sumerian is largely "agglutinative," that is to say it forms compound words and sentences by strings of root-words arranged in a definite order according to the sense intended, either alone or with suffixes to the qualifying words; but even in Early Sumerian there is already a certain amount of inflection. What appear to be vestiges of this early agglutinative stage are the survivals in Indian Pali and Sanskrit of frequent compound words and strings of such, and in English the not infrequent use of compound words, and of occasional uninflected sentences, such as "No work no pay." In its later and more developed stage, however, the Sumerian introduces a considerable number of inflections by prefixes and suffixes, gunification or the addition of several strokes, and alterations in the consonants and vowels for vowel-harmony, which are generally in phonetic series with the chief inflections, prefixes and suffixes in the later and more highly developed Aryan languages such as English which is practically non-inflective. And after all inflections are so little essential that even in modern grammars they are called "accidence" i.e., "non-essentials."

THE SUMERIAN SYLLABIC PICTURE WRITING

The writing in Sumerian is not by alphabetic letters, which were a later adaptation of the Sumerian writing, but by picture-signs or pictographic word-signs. Such signs occurring in Egypt were called by the Greeks "hieroglyphs" or "sacred writing," as these ancient scripts were especially used by the priests for sacred writing long after they had become

more or less obsolete. This term "hieroglyph" is also applicable to the Sumerian writing which I show to be the parent of the Egyptian hieroglyph system, see plates I-V and text.

These hieroglyph word-signs number about six hundred. The older signs are pictures mostly of well-known natural and artificial objects, which were self-interpreting in their earlier fuller forms. Those signs represent ¹ heads and other principal parts of the bodies of men, women, children and animals, figures of birds, reptiles, fishes and insects, trees, plants, fruit, grain, etc.; the heavenly bodies, sun, moon, stars, sky, etc., earth, mountains and water, fire and lighting, etc., weapons, tools, domestic and other utensils and furniture; buildings, forts, towers; carriages, ships, etc., articles of clothing, crowns, jewellery; food, drink, etc., etc.; and many of the signs are not yet identified as to the object they represent, even when their phonetic value is known. In the earlier writing the pictures are drawn more elaborately and naturalistically than in the later period when the signs were made with as few strokes as possible for rapid writing, curved lines tending to be written by straight strokes, and circles diamond shaped, so as to become almost diagrams, yet still retaining characteristic features, see plates I-V.

Each of these pictographs possessed the phonetic value or name of the object pictured which became the primary meaning of the word-sign thus written.

In the accompanying plates I-V, are given some of these simple Sumerian pictographs with their word-values, most of which it will be seen possess essentially the same word-form and meaning as in English. And alongside are placed the corresponding Egyptian hieroglyph with its word-value, showing the radical identity of the hieroglyph, as well as of its phonetic value and meaning with the Sumerian.² The more detailed and realistic drawing in the Egyptian hieroglyphs is seen to be merely a neo-archaism or pseudo-archaism, as the earliest known hieroglyphs in Egypt for continuous writing on the ebony label of Menes, are of the simple Sumerian type and approximate to the Sumerian forms.

¹ As shown in the classic work of Professor Barton, see BW, Part I.

IDEOGRAPHS AND SYLLABIC WRITING

Besides the primary word-sound and meanings expressed by these pictorial signs employed for writing the spoken name of the object pictured, the Sumerians adapted these syllabic pictographs to the fuller expression of speech and abstract ideas by making the signs express also the various ideas connected with the objects pictured. Thus the pictograph of the Sun stands not only for the Sun itself and its name, but also for shine, light, bright, glow, warm, heat, day; the pictograph of the Moon for shine, month, thirty (days), wax, wane, dark, death and fate; the picture of a Club or Bat for bat, baton, beat, fatal, etc., and so on, the particular meaning being indicated by the position of the sign in the sentence or by the context or prefixes or affixes, etc. In this usage the signs are called "ideograms" or "ideographs."

A further stage was the use of these ideographs merely for their sound as phonograms, without any ideographic sense, for spelling words of more than one syllable. This usage is termed "syllabic" as opposed to the later "alphabetic" spelling; and it continued in Sumerian and Babylonian down till the latest period.

Many of these signs when used to express more complicated abstract ideas are compounded or "*gun*-ified" by the introduction within them of strokes or other signs. And here it is significant of the essential identity of the Sumerian and Sanskrit to find that this Sumerian term *Gun* used by the Sumerians for their compounding sign, from *Gun*, "a collection, totality,"¹ is identical with the Sanskrit *Guna*, "a multiplier, a coefficient"² which Sanskrit grammarians use as "*gun*-ate" in an analogous sense; and this Sumerian *Gun* is disclosed as the source of the old Latin '*Con*' "together with," i.e., 'a similar sense' (see *Gun* in the Dict.).

These various ideographic words in the Sumerian vocabulary are catalogued and their respective meanings defined in the copious bilingual glossaries in Sumerian and Babylonian of the Assyrian and Babylonian grammatical tablets to the number of many thousands of words. They give us a vivid insight into the scientific psychology of our ancestral Aryans in regard to the workings of their fertile mind and imagination in exploring the realms of Thought and in coining for us abstract words.

SUMER-ARYAN DICTIONARY

HOMONYMS AND SYNONYMS

As in English and other Aryan languages, the Sumerian possesses a considerable number of words of the same sound but differing in their meaning, the so-called "homonyms." Just as in English, for example, *Air*=variously "atmosphere," "haughtiness," "mien" or "manner" and "a tune"; and *Bear*="carry," "suffer" and "an animal"; and *Can*="able" and "a vessel," or the contents of vessel, e.g., "no comfort but a hearty can" (Burns's *Jolly Beggars*); *Dam*="mother" and "embankment"; *Jar*="a vessel," "quarrel," "discordant sound," "a shaking," etc., etc., so in Sumerian we have this same feature. Thus *As'* means in Sumerian "a star" (aster), the number "one" (ace), the number "six" and "an arm," etc. (see Dict.); *Bar*, means in Sumerian "a bar," "brother," "bright," "barrack," etc. (see Dict.) and so on. This feature is also particularly conspicuous in Sanskrit. In Sumerian, however, such homonyms are usually distinguished by different pictographs or hieroglyphs which indicate the different meanings. And it is supposed that as in Chinese, which also possesses homonyms, and which I find contains several Sumerian words written by practically the same hieroglyphs, the different meanings were distinguished in the spoken speech by different tones or pitch.

Moreover, as in English and other Aryan languages, the Sumerian possesses a large number of synonymous words, i.e., different words expressing the same meaning. This synonymy in Sumerian has been called "polyphony," and treated as if it were a peculiarity of the Sumerian. These synonyms are grouped together under their respective Sumerian syllabic pictograph or word-sign in the Babylonian and Assyrian bilingual glossaries. They are apparently in the main dialectic words of different tribes for the same sign, or for different shades of meaning.

As example of these synonyms, the word-sign for "water" picturing a wavelet has besides its common word-value of *A* or *Ā* (i.e., the source of the *Aa*, *Ae*, *Awe*, *Eye*, etc., river-names, see Dict.) also the synonym of *Bur* (i.e. the source of the English Bore a tidal surge, Brook and Burn, a stream, see Dict.), also the synonym of *Dur* or *Duru* (i.e., the *Dara* of Sanskrit, *Darya* of Indo-Persian, *Dwr* of Cymric, *U-Dor*, water, of Greek and cognate with the Sumerian *Badur* and Hittite "*Waa-lar*"

SUMER-ARYAN DICTIONARY

and English "Water"); and *Me* probably a contraction for Sumerian *Mer* a marsh, sea, disclosed as the source of English *Mere*, *Marsh*, *Marine*, Latin *Mare* and French *Mer*.

These synonyms are exceptionally numerous in Sumerian, most words having two or three or more, and several having a dozen or more. As a consequence, Sumerian proper names, which are written by a string of such ambiguous synonymous syllabic signs are exceptionally difficult and generally impossible to "restore" with certainty into their true form in "Roman" alphabetic letters, without a key to the traditional forms of the names. Assyriologists have hitherto possessed no key whatever to the traditional form of the names of the Sumerian and Akkad kings (excepting the solitary Sargon and doubtfully "Gilgamesh") and of their cities. Yet they are in the habit of reading or "restoring" these names by pure conjecture, selecting haphazard one or other of the various synonyms of the signs according to their individual fancy with the result that the readings or "restorations" of the names by different scholars not only differ more or less widely from one another, but few are strictly correct and many of them are entirely distorted and fictitious. Now, an unique key to the traditional form of these ancient "Sumerian" kings' names exists, as I have shown, in the official systematic and detailed lists of the Early Aryan kings which are fortunately preserved in the Indian Epics of the Ancient Aryan kings. And in previous works I have demonstrated the use of this key in recovering the proper forms of the names of the kings in entire dynasties of the Early Sumerians.

SPELLING OF WORDS IN SUMERIAN AND IN LATER ARYAN LANGUAGES

The spelling of words in Sumerian writing is remarkably fixed and uniform in the different texts and documents. The usual dialectic differences however occur through the phonetic interchange of consonants of the same class as in other Aryan languages, such as between the labials *B*, *P*, *F*, *M* and *W*, the dentals *D* and *T*, gutturals *H*, *K* and *Q* and the cerebrals *L* and *R*, as is partly expressed in "Grimm's Law." And the vowels are almost always freely interchangeable, which is possibly a reason for the notorious vagaries in the pronunciation of the vowels in English.

SUMER-ARYAN' DICTIONARY

The spelling of the Sumerian words is obtained from the numerous Babylonian and Assyrian bilingual glossaries. These glossaries, written in "cuneiform" or "wedge-headed" writing, a later form of writing the Sumerian pictographs by dabs with a wedge-shaped style on wet clay-tablets afterwards baked, are classified for easy reference in the standard dictionaries of Brünnow, Meissner, Prince, Barton and Muss-Arnolt. In the latter three, and also in the partial lists of Delitzsch, Pinches and others, the words are transliterated into "Roman" letters by the universally recognized system of Assyriologists and other oriental scholars. The elementary vowel and consonantal letter signs thus comprised in these Sumerian words is detailed in the companion work on "The Aryan Origin of the Alphabet," wherein is disclosed for the first time the origin of our Alphabetic letters from the pictographic word-signs in Sumerian writing.

The changes in the forms and spellings of Aryan words in the course of "wear and tear" down through the ages are now seen to be very much less than has hitherto been supposed. When a literary language, such as Greek, Latin, Sanskrit, French and English, is examined at different periods or stages in its development or currency, it is seen to have undergone great changes. But these changes relate more to the grammatical construction of the sentences and their idioms than to changes in the form or meaning of the actual words themselves. And colloquial, as opposed to "book," language often preserves archaic forms of the words practically unchanged. Thus we shall find from this comparative dictionary how remarkably little alteration has occurred in the spelling of radical Sumerian words in the various modern Aryan languages. Indeed common essential words appear to be amongst the most imperishable of human things.

This relative fixity of Sumerian words was doubtless due in considerable part to the syllabic writing and spelling which is mainly etymological and self-explaining. It is all the more remarkable in view of the notorious vagaries in medieval and modern spelling, e.g., in Anglo-Saxon and Early and Middle English down to the invention of the printing-press which tended to stereotype writing; though even Shakespeare some centuries after the printing-press is said to have spelt his own name in over half a dozen different ways on the same document.

SUMER-ARYAN DICTIONARY

Writing tends to preserve the more archaic and truer pronunciation which is evidently indicated by the earliest written or spelled forms of words. The later varying ephemeral fashions in pronunciation which have crept into English and the other Aryan languages by clipping and eliding consonants and introducing *r* so as to emasculate the language and make it differ considerably from the spelling, a custom or usage more in vogue in cities than in the provinces where the older and truer forms tend more to linger on, in the living speech or colloquialisms and "provincialisms"—the country life being always a truer index of the people than the town—have led to the popular notion that the spelling is wrong and should be amended by "reformed spelling" and by an universal "fonetik" language "Esperanto." But this is now seen, more clearly than before, to be an entirely mistaken view, and mischievous in that it would effectually destroy the keys to the etymological meanings of the self-explaining words which have been so faithfully conserved by our ancestors down through the ages by what has been supposed to be "peculiar" spelling, but which has generally preserved the earlier and truer forms of the words.

THE WORD-LISTS IN THE DICTIONARY

In this pioneer comparative Dictionary of the Sumer-Aryan languages the radical words only in the Sumerian or Proto-Aryan are chiefly dealt with, as these have been most fully analysed and studied by Assyriologists and their various shades of meaning well ascertained. They are largely verbal roots, which by their compounds form the great majority of the words in common use in Aryan languages, ancient and modern. Of the compound Sumerian words existing in the vast Sumerian vocabularies preserved in the bilingual glossary tablets of the Babylonians and Assyrians, and numbering along with the relatively few radical words 14,487 in Brünnow's *Classified List*, to which Meissner's List makes many thousands of additions, only a few have been included here, as the great mass of these compound words have not yet been critically examined by scholars and still await study by the new Aryan keys in the hands of the younger Sumerologists. Of the compound Sumerian words included in this dictionary several are hitherto unrecognized critically important.

SUMER-ARYAN DICTIONARY

historical and mythological Aryan proper names, see next section on Historical Effects.

The Dictionary is arranged in alphabetic order—the Sumerian origin of the signs and phonetic values of our Alphabetic Letters being disclosed in detail in the companion volume on "The Aryan Origin of the Alphabet," now in the press.

Under each alphabetic letter are grouped the Sumerian root-words beginning with that letter, in their transliteration into "Roman" characters. These are mostly simple roots without their phonetic complements, rendered into modern alphabetic spelling according to the universally accepted system of transliteration of the word-signs by Assyriologists, in which the vowels have generally their continental values—the English vowel pronunciation varying so greatly—and the authority for the spelling of the word is invariably cited. Following the Sumerian word is given its dialectic variants in spelling where such exist, also the chief synonyms of the word; and thereafter the literal definition of the Sumerian word-sign from the bilingual glossaries, all duly vouched for. The authorities chiefly cited are the great standard *Classified List* of signs by Brünnow, the uniquely full and standard book of the Sumerian signs and their definitions by Barton, supplemented by Meissner's List and Prince's invaluable Sumerian Lexicon. And a description of the object represented by the pictorial word-sign is given when the pictograph is recognizable.

In the second paragraph under each word are given the Babylonian or Assyrian equivalents of the Sumerian word, which define the meanings of that word, from the bilingual glossaries, each with its English translations, chiefly from the great standard Assyrian Dictionary of Muss-Arnolt, which is specifically cited for reference. And here are included some of the few known words of the late "Semitic" Phœnician from Carthage, etc.¹

In the third paragraph, the Egyptian derivations from the Sumerian

¹ The Semitic Phœnician inscriptions occurring in Phœnicia, Carthage, Sardinia, Marseilles, Cyprus and Egypt are mostly of a formal votive character with not a very great variety of critical words; and similarly those on the tombstones in Sardinia and Mediterranean sites (see WPOB, 53). A few short bilingual inscriptions occur in Semitic Phœnician, and Cuneiform, or in Greek, on weights, seals, coins, etc. Vernacular Phœnician bilingual with Latin in the Carthage dialect of the third century B.C. is found in the *Pœnulus* play of the dramatist, T. M. Plautus, the translation of which has been attempted by Schröder (SP, 285 f) and others, but these words have not yet been identified with certainty.

SUMER-ARYAN DICTIONARY

are given, in their various dialectic spellings from the great monumental dictionary of Sir Wallis Budge—a rich mine of Egyptology—supplemented by Mr. Griffith's *Hieroglyphs*, and this discloses for the first time the radically Aryan nature of the Ancient Egyptian language and its derivation along with its hieroglyph system from the Sumerians.

In the remaining paragraphs are given the equivalents in the leading languages of the Aryan Family, ancient and modern, namely Sanskrit and Pali, with Ancient Persian or Zend, Greek, Latin and the chief Latin languages, French and Italian; Gothic of the great Edda epics which I have found is essentially a dialect of the Ancient Briton,² the "Western" Gothic of Ulfilas (c. A.D. 350), and the kindred Norse including Danish and Swedish, the German or Teutonic; Cornish, which is especially rich in Sumerian words as was to be expected from the long association of the Amorites and Phœnicians with the tin-mines there, also the "Celtic" including Breton, followed by the Anglo-Saxon and Old English.

In the last paragraph is given the current English form of the Sumerian word, with a cluster of the chief English derivatives from that Sumerian word or root in question as a nucleus. Many more such derivative English and other words will be apparent to the reader.

These Sumerian radical words, it will be seen, equate substantially and often absolutely both in sound and in meaning with the corresponding words in English and the other Aryan languages, ancient and modern, including Egyptian. And it will be found that these radical words or word-stems form in English and the other Aryan languages by their compounds the great bulk of the words in those languages, as contained in their respective dictionaries, the majority of the words therein being coined from such relatively few radical words. When the Sumerian compound words have been more fully studied this word-list may be largely extended.

For comparative purposes, in Egyptian the final *t*, a feminine or abstract suffix, is usually placed within brackets, as the Sumerian made no distinction in gender. And similarly in the Gothic the nominative suffix *7*, which is a grammatical accretion, is omitted.

SUMER-ARYAN DICTIONARY

EFFECTS OF THE DICTIONARY ON PHILOLOGY, ETYMOLOGY, ETHNOLOGY, FOLK-LORE AND HISTORY

On Philology and Ethnology the effect of the discoveries embodied in this Dictionary must necessarily be of far-reaching fundamental importance. The science of philology, and especially its branch etymology, has fallen into considerable disrepute by its fantastic abuse by so many scholars and popular writers, whose wild guesswork and transparently false etymologies justify the sarcasm of Voltaire that "Etymology is a science in which the vowels signify nothing at all and the consonants very little." But rightly used philology and etymology are invaluable scientific branches of history and ethnology, as well as aids to literature, and they are now placed upon a much more solid basis than before by the discovery of the hitherto unknown parent of the Aryan languages.

Availing ourselves of the treasure of written words with graphic details of original meanings and pronunciations going far behind all previously known sources, which the restored Sumerian puts at our disposal, we can hear the voices of our Early Aryan forbears with almost gramophonic fidelity repeating the current words and language in our everyday modern speech.

English etymology is especially illumined by these discoveries. Of scientific works on this subject the most outstanding are the great classic dictionary of Professor W. W. Skeat—which has been specially helpful in compiling the later columns in this work—and the Oxford English Dictionary of Dr. J. A. H. Murray. These two treatises are now materially supplemented and their sources for most of the chief words greatly extended by the new evidence. This also discloses the Sumerian or Sumero-Phœnician origin of a considerable number of obscure roots and in their original forms, the existence of which in supposititious forms had been merely inferred or marked "unknown"; and not a few of the supposed derivations are found to be no longer tenable.

The English language significantly is seen to preserve to an especial degree the older and purer word-forms of the Sumerian or Sumero-Phœnician or Early Aryan speech with also a good many of its structural features. It thus preserves along with the Eddic Gothic a considerable number of purer Sumerian word-forms with their original meanings than

SUMER-ARYAN DICTIONARY

the Greek, Latin, Sanskrit, German and Anglo-Saxon, from which latter two nevertheless the English has hitherto been supposed to be derived although neither of them contain many of the elementary Aryan Gothic words present in English. Moreover its words approach more nearly to the Eddic Gothic than do any of the other European Aryan languages, owing apparently to its having been derived, as I have already indicated, from the Ancient Briton or "Catti" language or British Gothic,¹ of which literary specimens appear to survive in the older Gothic Eddas, which epics have been shown by Bugge and others to have been evidently composed in Britain. Whilst Anglo-Saxon and German, on the other hand, appear to have been merely local dialects of the Briton resulting from the former colonizing conquests of Germany and Denmark and Jutland, by the Britons or Phœnician "Catti," "Chatti" or Goths.²

The indigenous origin of the English language is confirmed by a large series of Phœnician inscriptions in the Ancient Briton language dating from 1100 B.C. onwards recently found on a prehistoric tomb in Ireland, and forming the subject of my special memoir which is now in the press. And it now appears that most of the words in "Anglo-Saxon" are neither continental Angle nor Germanic Saxon, but Briton.

The intimate affinity of the Eddic or Northern Gothic Language with the Sumerian or Sumero-Phœnician is also seen from the occurrence in Sumerian literature of the same personal and names, titles and exploits for the Early Sumerian kings and heroes as in the Gothic Eddas. Thus we now find through the Dictionary that the leading early Sumerian hero, who was afterwards deified, Lord or King *Dar*, *Dur* or *Tur*, is in the same relative position, with the same titles, and with the same exploits as *Thor* or *Dor* of the Eddas with his titles of *Bur*, *Fiorgyni*, *Miot*, *Ottar*, *Sig*, *Uko* and *Ygg*. The queen of *Dar* or *Tur* is *Sib*, the lady of the magic divining bowl, in series with *Thor*'s queen *Sif* and the magic bowl of the Well of *Urd*, of which *Sif* was a vestal priestess. As contemporaries of King *Dar* or *Tur* in the Sumerian we find *Frigg*, *Idun* of the apples of Life, *Thiazi*, *Bauge* and others as in the Eddas. The generic title of *Asa* or "Lord" or "lady" for *Thor* and his royal Goths is now found to have its origin in the Sumerian *As'*, "lord" or "lady" which is also

¹ WPOB, 167 f, 179 f, 370.

² *Ib.*, 135, 157, 186.

SUMER-ARYAN DICTIONARY

applied to these personages in the Sumerian. And the Eddic name of "*Ginnunga Gap*" or "Gulf or Gape of *Ginnunga*" for the name of the plain conquered by Thor is now disclosed as the Sumerian *Kan-in-gi*, the ancient Sumerian name for the deltaic plain of Chaldean Mesopotamia on the Persian Gulf. Most of these identities are established in the present part of the Dictionary, and fuller details are given in my new literal translation of the Gothic Eddas as a historical epic of human Early Gothic kings—a translation made many years ago, but the publication of which has been long delayed.

The Sumerian origin of the Egyptian hieroglyphs with their word-forms and meanings, hitherto wholly unsuspected is disclosed. This is illustrated in the plates in regard to 48 chief radical signs, and many others are given in the companion work on the Aryan Origin of the Alphabet. The radically Aryan source of the Egyptian Language and Civilization is also freely evidenced in the text, despite the infiltration of Semitic forms and idioms from the Semitic of Akkad and the Land of Ham.

On History and Ethnology, some of the effects of the new evidence in recovering remote history are indicated in the above paragraph—the detailed evidence for the date of King Dar is given in the work now in the press. Amongst other legendary heroes and demigods and people who have their *Sumerian* and human basis and identity thus recovered, are the Homeric Dar-danus, the Achaians, Dardanians, Dorians, Trojans and Phrygians, all of whom seem to be found also in the Egyptian. Mythologically, the gods Bacchus, Ouranos, and the goddesses Athene and Diana are also disclosed as Sumerian in origin and also appear to occur in Egyptian. Osiris, Isis, Ra and Ammon are found to be Sumerian and the original Sumerian forms of their names are recovered. Iron, under its Sumerian name of *Bar* or *Bir*, is seen the Sumerian source of the Latin *Fer-rum*, and the French *Fer*, and the English "Iron," and indicates the remote acquaintance of the Sumerians or Early Aryans with that metal. Whilst the identification of Menes, the founder of the First Dynasty of Egypt with Manis-tusu, the son of Sargon-the-Great, a Sumero-Phoenician, supplies for the first time the criterion for fixing that most disputed yet critically important of all dates in ancient history—the date of Menes.

SUMER-ARYAN .DICTIONARY

On Folk-lore, it is seen that the early Hitto-Sumerians, or Hitto-Phoenicians brought with them to Britain as part of their most treasured possessions, their body of traditional romance and nursery tales, now seen to be epic and infantile versions of great historical events in the rise of the Aryans. Thus the Arthur and Thor legends with their Holy Grail are based upon historical Sumerian heroic achievements. And similarly Jack-the-Giant-Killer, Jack-and-the-Bean-Stalk, Old Mother Hubbard, Old Mother Goose, Little Red Riding Hood and so on.

In such a pioneer work dealing with so many details and compiled from so many diverse sources and languages, although great pains have been taken to avoid errors, it is too much to hope that none have crept in. But, like the author of a famous dictionary, the writer would say, that the number of mistakes that critics may find will be a source of satisfaction rather than annoyance, as bringing us nearer to the absolute Truth.

Here it is a pleasure to acknowledge the kind assistance of my friend Dr. Islay B. Muirhead for several suggestions for clarifying expressions in this preface; the ever-ready help extended by Prof. T. G. Pinches in solving Assyrian knotty points; and the courtesy of Sir Wallis Budge for several additional references to the pioneer work of Sir Henry Rawlinson. My thanks are also due to the Edinburgh Press for their special care in printing the detailed references.

The present volume, forming Part I, gives the Sumerian words with their Aryan derivatives from A to F. In the concluding part it is hoped to supply as an appendix an index to the English words derived from the Sumerian or Early Aryan for facility of reference.

In conclusion, it only remains to add that not only as preserving the language, but as reflecting the mind and temperament of the parents of our Civilization as expressed in their art, science and religion, the Sumerian or Early Aryan has in these days a unique and growing interest; and it may be hoped that the younger generation of philologists, for whom this work is written, may be led to devote time and attention to its sympathetic study in the light shed upon it through the newly found Aryan keys.

See details in WPOB.273f.

AD, AT, ADDA

Su.—**AD, AT, ADDA**, Father, also Mother. Pictured by a sign variously interpreted: (1) as a house containing the sign for Protection and thus designating the Father as "Protector of the House" or "Hus-band," or (2) a Nest with the sign for "Build or Beget." The sign also means "Mother" and this may be as P. suggests, a vestige of the early matriarchal period when the mother was the head of the gens or family. In this regard it is noteworthy that the mother is often mentioned before the father, e.g., "Mother and father" the reverse of the Semitic usage. This, however, may be owing to the well-known chivalry of the Early Aryans and their treatment of women as equals. *Adda hur-Mariu* or "Father of the Western Land" was a Sumerian title as supreme ruler and emperor. 4165-7, 4186. P.15, B.162.

Hoax, to trick or cheat, probably is derived here, when the trickery of augury and soothsaying was exposed. Hoc-us, Hoc-us-pocus.

AKAIA

Su.—**AKAIA** (Uku-), The Akaia people—Achaia. They are defined as "The host of the nation or people of the city of Dura" (or Troy, see *Dura*). This important historical record of the Achaians, not hitherto recognised, occurs in CIWA. IV. 28, 23a. It confirms my previous evidence that the Achaians and Trojans were Sumero-Phoenicians (WPOB.117, 238 f., 246, 325, 331, 411 f., WISD.77 f.), and that the Trojan war in Homer's *Iliad* romance was an internecine

feud between the rival sections of the same Aryan Sumerian people. The date of this tablet may help to fix the actual date of the "Trojan War," or reconquest of Troy by the Western Achaians of Greece. 5915. And see *Dura*, Troy.

Ak.—*Tirit hissai niti*. The host of the nation of *Tiri* (or Troy)—a city spelt in the Sumerian *Dura*, q.v., and cp. on "host and nation." 453.737.

Eg.—*Aqau-asha*, a Mediterranean people. 93a. *Aqa-bat* (or ? *Aqa*-people), a foreign (to Egypt) people. 11a. (*Akaru*, earth-god ancestors of Rā. 11b). (*Aaku*, a group of warriors in the Lower World (Tuat)). 26a.

Sk.—? *Yaksu* or *Yadu*, the oldest and leading one of the five tribes of the Aryans, in the Vedas and Epics of which the others were *Turvasa*, *Druyu*, *Puru* and *Anu* (? Ionian).

Gr.—*Achai-oi*, the Ancient Aryans of Greece who conquered Troy in the Trojan war of Homer's *Iliad*.

Lat.—*Achai*, the Achaians of Ancient Greece.

Goth. & Anc. Br.—*Oku*, *Uku*, title of Thor or Dor, in the Snorri Edda, wherein he is styled *Oku-Thor*, or ? "Thor the Oku-ain or Achaian."

E.—Achaian, a Sumerian title for the Trojans or Dardanians or Dorians. On the identity of King Thor, Dor or Dur, the first traditional king of the Goths with Dar-danus, first king of Troy, see *Dar*, King Dar.

AKH, URH

Su.—**AKH, URH**, Eagle or "Bird of the Wind." Pictured by a Winged Disc above an object which appears to be a talon or claw, see pl. I., and cp. Egyptian hiero. 8124, 8130, 8290. B.346. And see *Ari*, Eagle and *Bah*, Hawk.

Ak.—*Issur šari*, bird of the wind. 1106.

Eg.—*Akha-mist*, the Eagle. 135b., and cp. Figs. 1, 75 in G. which distinctly picture an Eagle. See hiero. in pl. I. *Akhai*, a soaring bird. 135a. *Agbu*, the wind. 95a.

Sk.—*Aksha*, the great sky-bird of prey. *Ag*, the wind.

Lat.—*Aquila*, the eagle. *Aquilo*, the stormy wind. *Aigle*, eagle. F.

A-S.—*Egle*, troublesome, hateful.

O.E.—*Egle*, an eagle. *Aquilon*, the north wind (Shakespeare).

E.—Eagle, the king of birds; of the Falconidae family: Eagle-eyed, Eagle-sighted, Eagle-hawk, Eagle-owl, Eagle-t, Eagle-winged, Spread-eagle. *Aquil-ine*, relating to the eagle, curved or hooked like an eagle's beak.

AKHA, AHA, EKHA

Su.—**AKHA, AHA, EKHA**, Strike down, kill, destroy, draw the sword—Fight. Pictured by an arm holding a shield with battle-axe, sub-

- stantially identical with the corresponding Egyptian hieroglyph *Aha* or *Akha*, Fight: see signs in plate I. 7265, 7269-71, 7274. M.5259. B.312. On the *Akha* or *Aha*, revised value of this sign, see *Akha* reading of 7265 and cp. 5448, where the sign spells *A-akha* (-du). The "Lulu" conjecturally read in 7265 appears to be not a phonetic value, but a definition of *Akha*, "seize, go or advance, take hold, capture" (by the Akkad definitions *Alahu*, *Kamā*, *Sabatu*, etc.), 10,674, 10,727 and MD.45, 392, 860, etc.). The rest of the definition in 7265 thus reads *Akhala*=*Akhula* or "cut down" (or reap in the agricultural sense of "cut down," MD.29, as also in the Egyptian). And this sense of "cut down" or fight is confirmed by its further definition of "draw the sword." Akkad, *Silipu*. 7283 and MD.1046. And see, *Aka*, ache, *Nar* and *Pakh*, Fight and *Tus* or *Tussu*, Tussle, strife.

Prig, a thief, to filch or steal: Prig-ger, Prig-ging, Prig-gish. Lion (Leo), from the Akkad Labbu, a lion, which is probably, I think, also the source of Lupus, a wolf, as the Sumerians called the Lion "The great Dog," and the Wolf is the parent of the Dog or domesticated Wolf.

FIRIQ, PIRIQ

Su.—FIRIQ, PIRIQ (An-), Lady (or Lord), Firiq or Piriq; and Firiq-gi (Gal- or Gulu-), "The Maid Lady Firiq," defined as "The bearer of the (Magic) Drinking or Wine Jug or Bowl" i.e., Frigg or Göl or Jörd of the Eddas with her Magic Wine-Bowl of Urd, see Dur. Two male Firiqs or Piriqs are also recorded with the titles of "Lord (or god) Firiq" of the lightning flash and The prince of the Gid or Caduceus (9194, and see WPOB.239, 245 f. for representation of the latter personage on Sumerian seals). The names of these Firiq personages are pictured by the Wolf's or Lion's head of the previous word-sign plus the sign for Lord, Lady, god, king or queen. 9190, 9194-5. In Lady Firiq's title Gi,=maid (Amu, cp. Melsn. 590).

Ak.—Bēl or Sarru (amtu), šāqu-gulu, the maid Queen of the Wine jug or bowl—a title of Tiamat, the she-serpent queen of the Deep. Cp. 1100 and 1097-9. Il Nergal sa birqi, the god of the lightning flash. 193. Il Samaš, the Sun-god.

Co. & Celt.—Brigit, a prehistoric goddess in Ireland. I.

A-S.—Frig, Friga, the Saxon Venus and wife

SUMER-ARYAN. DICTIONARY. FIRIQ-FIRIQ—FIRIQ-SU

of Wodan (Odin). *Frigu*, love. *Frig-dag*, Frig's day or Friday. *Walcrigga*, Saxon goddess of War.

E.—Brigit, a tutelary goddess of the Irish, and latterly (or her namesake) was canonized in the Christian calendar as St. Brigit, Brigid or Bridget. Frigg, title of *Jörd* or *Gol*, the matriarch Serpent-priestess, or weird of the Magic Bowl or Holy Grail of Urd, wife of Wodan, and mother of the Fen Wolf who was the leader of the Wolf (cult) -tribe against King Thor with his sun-cult and Patriarchy in the Eddas. Valkyries, the virago and weird war-harpies or hounds of Wodan and maids of Frigg. This name seems to be a cognate of Frigg and Virago by the common dialectic change of *l* for *r*, rather than a derivative from *Val* or *Wal*, "slaughter" or *Val* or *Wal*, "choose," especially as the rest of the word so divided, namely *Kyr* or *Kyrra*, means "calm," which is wholly inapplicable to the Valkyries. Virago, a violent angry vixen woman, an Amazon of the Athens type. Friday, the Anglo-Saxon *Frig-dag* or Frig's day, named after Frig or Frigg whom the Anglo-Saxons adopted as their Venus.

FIRIQ-FIRIQ, FIRIQ-FIRIQ or TIANU

Su.—FIRIQ-FIRIQ, FIRIQ-FIRIQ or TIANU (Mad-), The Western Lands or Ammurum Lands, or Land of the Muru, Marutu or Amorites. It is also defined as "The Behind" or Hinter Land (*re* the Sunrise in Mesopotamia). Pictured by the foregoing Lion or Wolf's head doubled or with the plural sign. 9220-1, B.400. N.B.—The Egyptian form of this name "*Pairqa*, foreign land," bears also the same plural sign prefixed to it, which is the equivalent of the doubling of the Wolf or Lion head-sign in the Sumerian. And the Egyptian also possesses the "*Tianu*" synonym for this *Pirig*, a name hitherto read "*Tidnu*." The idea of Lions and Wolves as a designation of the Western Land may have been suggested by the Lions and Wolves infesting Upper Egypt at Thinis (the early capital of Menes—Egypt being West of Mesopotamia) as well as infesting the coast lands of Lybia (? *Labba*, a Lion and *Lupus*, a Wolf), Tunis (*Tann*=Wolf in Heb.) and Mauretania, which, along with the Cornish Tin mines and the British Isles with their prehistoric inscribed megaliths, and Asia-Minor and Syro-Phœnicia-Palestine, formed, as I have shown, "The Western Land of the Morites or Amorites." See WPOB. 13, 160 f., 167-71, 183, 190, 216 f., 224-5, 257-8, 412 f., with illustrations of monuments and decipherment of inscriptions.

Ak.—*Mât Ammurû*, Land of the Muru, Martu,

Murutu or Amorites. Cp. 30. *Mâlaharre*, the behind or Western Land. 30. ? *Tani(f)*, the tutelary goddess of the Phœnician Punicas at Carthage. (*Tann*, a wolf in Hebrew).

Eg.—\ *Pairqa*-smt. 982b. The *Pairqa* foreign lands—see details under *Pirig-su*. *Berg*-smt. 877b. *Barg* foreign land. *Tennu*; the district of Abydos, ? the *Ta-a-a-ni* of the Assyrians. 1057a. *Tennu* (*Thinis* of the Greeks) was the early settlement of Menes (who, I find, was a Sumerian) on his arrival in Upper Egypt, which, along with the rest of Egypt was a "Western Land" in relation to Sumerian Mesopotamia. *Tennu*, Libya. 1057a. *Tanis*, ancient city of Egypt in the Delta. Str.802. *Tanis*, city of the Thebaid. Str.813. *Tanitic*, name. Str.802. *Tanitic*, mouth of the Nile. Str.800 f.

Gr.—*Thinis* (*This*), capital of the Nome of Abydos in Upper Egypt. *Tynês*, Tunis, the province of Carthage.

Lat.—*Tynas*, Tunis and its province.

E.—*Tianu*, ancient name for "The Western Land," of the Sumerians, "*The Land of the Muru, Martu Murutu or Amorites*." This land of the Amorites seems to have included Egypt, Syro-Phœnicia-Palestine and the southern Asia-Minor coast-land, as well as Libya, Tunis, Mauretania or Morocco, the Cornish Tin mines and the British Isles with their prehistoric inscribed monuments from about 3000 B.C. See evidence in WPOB. references cited in para. 1. And on the Amorites in the Indus Valley, about 3100 B.C., with their inscribed Sumerian seals with translations, see WISD.8 f., 43, 51 f., 91 f.

FIRIQ-SU, FIRIQ-SU

Su.—FIRIQ-SU, FIRIQ-SU (*Su-Uku*), The Great *Firig* or *Pirig* nation, also designated "The Mass or Multitude of People of *Firig* Land" (*Firig Kurra mes*)—The Phrygians. The name is written by the duplicated Wolf or Lion head-sign with the addition of the signs for "great" and "nation." 5915, 9224, M.6921, CIWA.IV.13, 28b and CT.2, 25, 11b.

Ak.—*Nêsu (pirig)*, The *pirig*, nation. Cp. BW. p. 209. "*Pirahi*" in the Amarna letter of King Dûrattu, the Mitani (Bede) c. 1400 B.C. appears to be probably used in the sense of "The Phrygian."

Eg.—\ *Pairqa* smt. 982b or The Great *Pairqa*, foreign nation—see GH.31 for smt as "foreign tribe"; and the plural sign prefixed, *li* or *As*, probably = *dal*, great. (In BD. it is assumed to be a land, and as with unidentified lands generally, it is described as "a district in Syria, situation unknown"). *Barg smt*. 977b. *Barg*, foreign nation or country

- (also described in BD. as "a district in Syria, situation unknown").
- Sk.—*Vrici-vant*, *Muhā Vrici-vant*, "The Great *Vrici* nation." *Vrika*, people of the Middle Country. *Vriji*, great ruling people in Mid-India, who patronised Buddha.
- Gr.—*Phryx*, a Phrygian.
- Lat.—*Phryx*, a Phrygian. *Phryges*, Phrygians. *Phrygius*, a Phrygian or "a Trojan." *Phrygia*, Phrygia or Western Asia Minor, extending formerly from Cappadocia to the Hellespont.
- Goth. & Anc. Br.—*Fiorgyn* or ? "The Phrygienne," a title of the mother of King Thor in the Eddas. *Feriokar* or ? "The Phrygian," a title of Wodan, the husband of Frigg. *Feriokar-lin* or "The Feriokar (or Phrygian) Serpent (cult-man)," a title of Wodan in the Eddas.
- E.—Phrygia, an ancient division of Western Asia Minor, formerly extending from Cappadocia to the Hellespont, and presumably including Troy. Phrygian, a native of Phrygia, and occasionally used for "Trojan." King Thor's mother appears to have been a Phrygian lady, and Thor or Dor himself—the first traditional king of the Goths in the British and Norse *Edda* epics—appears also to have been a Phrygian or "Trojan." and we have seen his identity with Dar-danus the first Aryan king of Troy of Greek tradition—see *Dar*. The extremely remote historicity of the Phrygians as a great ruling Aryan-Amorite people is also disclosed.

FISH, PISH, BIESH

- Su.—FISH, PISH, BIESH, Fish or Great Fish, also a title of The god of the Waters, and of the Sun. Pictured by a Fish with the sign for Great. 6925, 6928, 6933, 7224, B.303. See for representations on Sumerian, Hittite, Phœnician, Babylonian and Ancient Briton

- seals, amulets and monuments. WPOB.247, 251, 300, etc. and WISD.86 f.
- Ak.—*Mam-lu*, mighty, the great *Pish*, a title of *Is* (Jah), the Sun and Marduk. 353.
- Eg.—*Fettu*, fish. 262b. *Bega*, a kind of fish. 225b.
- Sk.—*Visāra*, a fish. *Vish-nu*, the Sun-god as a fish, see details with representations in WISD.83 f.
- Gr.—*Pos-cidon* or "The likeness (*eidon*) of *Pos* (a Fish)." The Sun-god or Neptune, represented with the body and tail of a fish. See WISD.85, for his early representation.
- Lat.—*Pis-cis*, a fish.
- Goth. & Anc. Br.—*Fisk*, a fish. *Fisks*, a fish. U.
- Nor.—*Fisk*, fish. DNS.
- Ger.—*Fisch*, fish.
